

# CAULT

## LITEPAPER

Cault is a simplified market tracking platform designed to make financial data easier to understand, faster to access, and fully customizable for every user. In a space dominated by complex tools and information overload, Cault focuses on delivering only the most relevant insights through a clean and intuitive interface.

The platform starts with a strong focus on the cryptocurrency market, offering users a clear overview of market conditions, personalized watchlists, portfolio tracking, and structured news – all in one place. Instead of switching between multiple tools, users can quickly understand what is happening in the market from a single, unified dashboard.

A key element of Cault is its AI layer, which enhances the experience by generating summaries, explaining market movements, and providing insights tailored to the user. This reduces the need for manual analysis and helps users make sense of the market without deep technical knowledge.

Cault is designed for both beginners and more experienced users, combining simplicity with flexibility. Through customization options, users can adapt the platform to their own workflow, making it a comfortable and efficient daily tool.

The long-term vision is to evolve Cault into a universal market interface – a single place where users can track multiple asset classes, monitor their portfolio, and receive meaningful insights in real time. Rather than increasing the amount of data, Cault focuses on improving its clarity, relevance, and usability.
